

# destination: a modern cloud operating model.

how automotive and aerospace can migrate  
successfully with randstad digital

randstad  
digital

# which of these are your cloud migration roadblocks in automotive and aerospace?

## data security and compliance concerns.

“Will the Cloud satisfy the regulatory requirements and data sovereignty we need to meet, as set by the likes of the Federal Aviation Administration and the EU Data Act?”

## vendor lock-in and portability.

“Do we risk dependency and the potential higher costs of a single vendor, or seek flexibility but with added complexity?”

## data migration complexity.

“How can we migrate large, diverse datasets (such as proprietary designs and critical operational data.) and ensure integrity and accuracy?”

## change management.

“How do we manage stakeholder expectations and potential cultural resistance?”

## integration and service disruption

“Are our current systems compatible with cloud-based systems? How do we ensure public safety is maintained during downtime?”

## skills and expertise gaps.

“Is our existing IT talent specialized and diverse enough to adopt and deploy new cloud-based services?”

## cost management and optimization.

“Can we justify the initial investment, plus additional costs for ongoing performance monitoring and optimization services?”

# a roadmap to the best cloud migration approach for you.

These seven strategies help you to take the right step forwards, and move your applications and data from on-premises infrastructure to the Cloud successfully:

1

## refactor.

Re-architect your workloads to support the most advanced cloud-native capabilities and remove legacy frameworks.

5

## relocate.

Migrate workloads without impacting your ongoing operations, rewriting source code or acquiring new hardware.

2

## replatform.

Move an application to the Cloud and leverage cloud-native capabilities, whilst keeping its original architecture.

6

## retain.

Continue to operate workloads as they are, due to dependencies on other applications or limited business value in cloud migration.

3

## repurchase.

Drop and shop, retiring legacy services for third-party managed services from cloud providers.

7

## retire.

Terminate workloads operating on legacy frameworks to prepare for your cloud-native deployments.

4

## rehost.

Transfer all application data and workflows to cloud services that match your workload's existing requirements.

# how we can help you on your journey to a modern cloud operating model.

Randstad Digital offers a tailor-made suite of services to guide you through every phase of your cloud journey.

## a cloud-centric culture.

- Strategic planning for cloud adoption
  - Advisory on cloud benefits and best practices
  - Migrating legacy systems to cloud platforms
  - Ongoing support for cloud-based operations
  - Innovation through cloud-native solutions
  - Collaboration and knowledge sharing between teams
- 

## future-fit agility.

- Access digital talent with cloud expertise and extensive migration
  - Establish and optimize your hybrid-cloud, lift-and-shift or re-engineer your business-critical applications for the Cloud
  - Relocate infrastructure to the Cloud or rehost applications into a containerized Cloud environment
  - Gain cloud-optimized features and capabilities for your applications
  - Managed end-to-end service for outsourcing with a trusted provider
- 

## cloudops.

- Optimize your Cloud platforms to their full potential
  - Receive a fully managed service for your Cloud environment with an extensive global team of digital talent
- 

## continuous cloud innovation.

- Unlock expertise on emerging Cloud technologies and best practices
- Access training programs and upskilling initiatives
- Identify opportunities for innovation within the Cloud infrastructure
- Curate insights to drive iterative improvements in Cloud solutions

## ready to partner with randstad digital?

We have been recognized as a Product Challenger, due to our progressive approach to cloud and digital enablement. As experts in the Cloud, we provide advisory services designed to help you along every step of your transformation journey – from creating a clear and effective migration strategy to helping you achieve cloud excellence.

### talent services.

Scale your team with exceptional talent.

### global talent centers.

Leverage a ready-made global delivery model.

### managed services.

Accelerate the impact of your digital enablement programs.
